1. Introduction

Regression Test Package shows the test cases needed in this project and this could check if those functionalities works as our client expect. The scope of those test case covers Q&A forum, WAT point system, Profile system, Event page and Redemption system. Since we do not have enough time for redemption feature, our clients agree we can save time on focusing other features. This testing focuses on Q&A forum and Profile system. In our project, we use PHPUnit to test our test cases.

2. Tests to run

We may have the following cases that system administrator will change in the future.

TC-01, TC-02, TC-03, TC-04, TC-05, TC-06, TC-12, TC-17, TC-18 are the cases that may change in the future. The rationale is that administrator might want users to upload the image in the thread, post and event. Now users could not upload image in the thread and post to elaborate their questions and answers. Administrators could not upload image to event when they create an event. They just can put a URL there to show the image in the event.

3. Regression Test Results

Our team tried to meet up most of our clients change in the requirements. Most of the changes are on the UI. Hence, they mostly do not affect test results. But some changes do affect the test result like changing editing thread and post within the same page. Even though we still keep most of cases working as expected. After our team and our clients testing, we have the following test results.

Test Case Number	Iteration	Testers	Result
