1. Introduction

1.1 Purpose of the SSAD

- The report demonstrates the whole picture of the project, which includes a synopsis of the key features and people who will be involved in the "WAT" Network.
- The report summarizes the architectures, both software and hardware, used in the project.
- The report presents essential details about the system to be developed, and avoids the generic introduction relating to our project.
- The SSAD presents the system structure independent of the implementation technology, and provides a clear picture of what needs to be done rather than how things need to be done.

1.2 Status of the SSAD

Currently we have updated the SSAD report to include the System Context diagram and Use Case diagram i.e. Section 2 in accordance with to our project "WAT" Network. This is the initial version of SSAD.

2. System Analysis

2.1 System Analysis Overview

The primary purpose of "We Are Trojans" Network is to provide a platform where students can interact with fellow Trojans. The system provides users with an online forum, where users can interact via posting on the forum. The forum allows the users to comment on threads, like posts, and dislike posts. To encourage more and more people to join the forum, the system uses a WAT Points. The WAT Points are awarded to a particular user when other users like his post on the forum. The points can be earned to gain recognition on the leaderboard as well as can be used to redeem USC items/ USC Bookstore gift cards via the website.

2.1.1 System Context

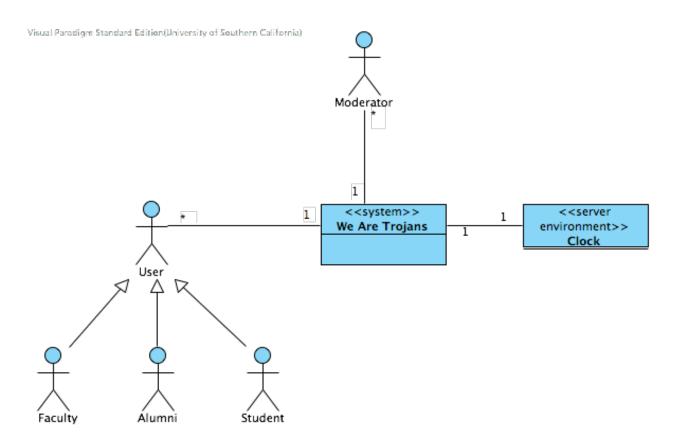

Figure 1: System Context Diagram

Table 1: Actors Summary

Actor	Description	Responsibilities
User (Student, Faculty, Alumni)	USC students, faculty, and alumni who participate in the Trojan network	 Start a thread and post on a thread. Like, dislike a post/thread in the system to give credibility of both posts and threads Redeem a gift card, items from points earned in the system Undate their own profiles reflecting
Moderator	Selected personnel to maintain the system	their personal information Review and delete rule-violating posts Pin important posts Create categories for the posts Arrange posts to a categories Manage users' accounts
Clock	System Clock	Provide the system time

2.1.2 Artifacts & Information

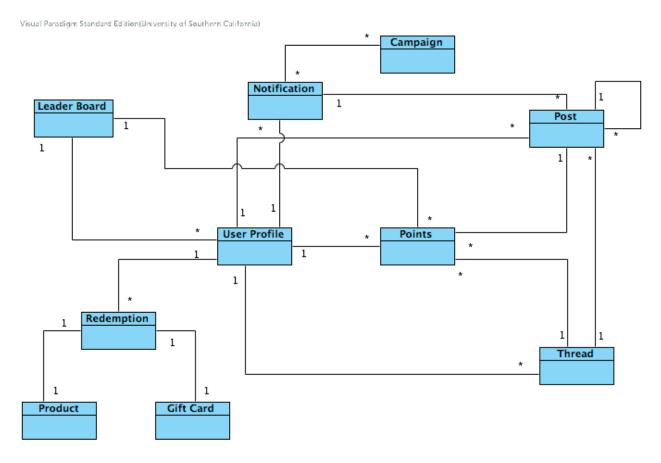

Figure 2: Artifacts and Information Diagram

Table 2: Artifacts and Information Summary

Artifact	Purpose	
Leaderboard	Contain all information, personal profile, classes and	
	points, about the user	
Redemption	Contain all information regarding redemption for users	
Product	Contain all information about items to be redeemed. This	
	could include a list of available items and points for a	
	particular item.	
Gift Card	Contain all information about gift cards to be redeemed. This	
	could include a list of available gift cards and points for a	
	particular card.	
User Profile	Contain all details about users. There is both prerequisite	
	information set by a system and user-created fields for their	
	special information.	
Points	Contain all points in each system of a user.	
Thread	Contain all thread posted by users. This includes a posting	
	time, a title, and details of a particular thread.	
Post Contain all post created by users. This includes a p		
	a title, and details of a particular post.	

Notification	This includes notification form threads, special events, and
	other possible notifications.

2.1.3 Behavior

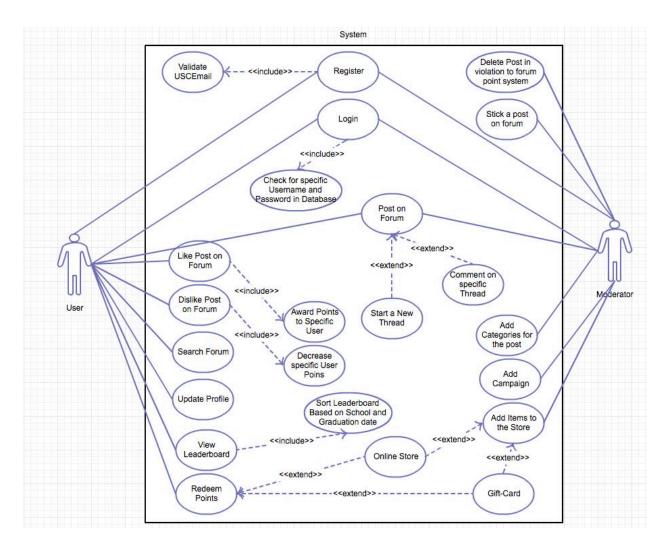

Figure 3: Use-Case Diagram for "We Are Trojans" Network System

2.1.3.1 Capability x

2.1.3.1.1 Process y

Table 3: Process Description

Identifier	User and Moderator	
Purpose	To illustrate all the functionalities that a user and a moderator can	
	do with the system	

1. User/Moderator can create his profile on forum.	
2. User/Moderator can post on the forum and receive likes	
and dislikes.	
3. User can earn points and redeem them in online store or	
get gift cards using the system.	
4. Moderator can delete post violating forum ethics.	
5. Moderator can add categories for the posts on the forum	
6. Moderator can add new items or gift cards for user to	
redeem points.	
7. Moderator can add campaigns to the system.	
8. Moderator can pin a post on the forum.	
9. User can Login using his username and password.	
10. User can search the forum, the post based on his search is	
founded will be loaded.	
Risk with the User System Implementation:	
1. The users might not like the graphical user interface for	
the systems	
2. The point system might not be enough to encourage users	
to join the system	
3. Changes in requirements	
Risk Associated with Moderator:	
1. Deciding the criteria to be used by the moderator to	
validate his action of deleting a post.	
1. The user joins the system and would like to interact with	
peers by posting on the forum.	
2. The moderator joins the system.	
1. The users are able to post on the forum, comment and	
like/dislike specific posts. they earn points and also give	
points to other users by liking their posts.	
2. The moderator deletes specific posts from the forum to	
avoid damage to the point system. Update the leaderboard	
and the usable points on monthly basis.	

Table 4: Typical Course of Action

Seq#	Actor's Action	System's Response
1	Joins the System by creating	The system validate user by
	Profile/Register.	USC email and create a user profile.
2	User/Moderator Login to the	The Password and Username validated
	system	via database and homepage is loaded.
3	User/Moderator write a post on	The Post is posted on the Forum for
	the system and click Post.	other users to read and assess the user
		post.

Deduct Points to that user and update his usable points and send notification to both the current user and the user whose post was liked. 5 User used points to redeem items at the online store 6 Moderator add items on the online store/ Campaign Events in the system 8 Users can view leaderboard and search based on schools or graduation date. 8 User can search the forum and view posts specific to his search. 9 Users can view other users profile and see their "WAT" Deduct Points to that user and update his usable points and send notification to both the current user and the user whose post was liked. The system subtracts specific number of points from the users usable points. The item is visible on the online store page and ready for the users to redeem points via purchasing that item. 		implemented.

Table 6: Exceptional Course of Action

Seq#	Actor's Action	System's Response
1	Joins the System by creating	The user was able to create profile
	Profile/Register.	without a valid USC email.

2.1.4 Modes of Operation

The system will not have multiple modes. Therefore, no description could be stated in this section.

2.2 System Analysis Rationale

The major operational stakeholders of the system are the USC students, USC faculty and USC alumni. These are the users who will become the members of the system. The users will be authenticated by the system via USC email. The "WAT" Network profile would be created once the user is validated.

The points system is a critical feature of the system. It serves as the base for the development of other features of the system such as the leaderboard and the like/dislike functionality for a post. The users actions in our system are associated with earning points. The more the users participate with the system the more points they can earn and gain recognition on leaderboard or redeem items for store or redeem a gift card.

3. Technology-Independent Model

3.1 Design Overview

3.1.1 System Structure

<< This section should contain

- a UML hardware component class diagram
- a UML software component class diagram
- a UML deployment diagram
- If necessary, a class diagram for the system's supporting software infrastructure
- and descriptions of the hardware components, software components, and, if necessary, the supporting software infrastructure components of the technology/platform-independent system architecture

More information and example can be found in ICM EPG> Task: Define Technology-Independent Architecture >>

<< Hardware Component Class Diagram>>
