Life Cycle Plan (LCP) Version 1.5

Table of Figures

No table of figures entries found.

1. Introduction

1.1 Purpose of the LCP

The LCP serves as a basis for controlling and monitoring the project's progress. It identifies available people, skills and resources in order to make the best use of these in the project's life cycle. It also gives proof to key stakeholders that the major life cycle issues is known and thought trough in advance.

1.2 Status of the LCP

The LCP is currently at the draft FCP version number 1.5. In this version, all sections from 1 to 5 are completed, where the previous version (VCP) only contained section 3.3 Skills.

1.3 Assumptions

- The duration of the project is 24 weeks, which are 12 weeks in fall 2014 and 12 weeks in spring 2015.
- All team members listed on the title page will work on the project during the fall semester.
- There is a possibility that Suleyman Erten will leave the project before the spring semester, as he does not take Software Engineering as his specialization.

2. Milestones and Products

2.1 Overall Strategy

The We Are Trojans (WAT) Network is following NDI-Intensive process, as a big part of the project involves modification of existing software to create the online forum core capability.

Exploration phase

Duration: 9/10/14-9/29/14

Concept: Identify operational concept, system and software requirements and

architecture, and life-cycle plan.

Deliverables: Client Interaction Report, Valuation Commitment Package

Milestone: Valuation Commitment Review

Strategy: One Incremental Commitment Cycle, Risk assessment analysis, Win-Win

Negotiation Sessions.

Valuation phase

Duration: 9/30/14-10/15/14

Concept: Identify Objectives, Constraints and Priorities, Develop operation concept, Explore alternatives, Provide project feasibility evidence, Prototyping, Assess and plans to mitigate risks, Plan and manage project, Perform win-win negotiation, Define quality and configuration policy.

Deliverables: Foundations Commitment Package **Milestone:** Foundations Commitment Review

Strategy: One Incremental Commitment Cycle, Risk assessment analysis, Win-Win

Negotiation Sessions, Planning Poker.

Foundations phase

Duration: 10/16/14-TBD

Concept: Assess Project Status, Plan and Manage Project, Manage Project Quality,

Prototyping, Develop Software Architecture.

Deliverables: Development Commitment Package

Milestone: Re-baselined Development Commitment Review

Strategy: One Incremental Commitment Cycle, Risk assessment analysis.

Re-baselined Foundations phase

Duration: TBD

Concept: Rebasedline Project Status, Prepare for Development Phase, Plan for Testing,

Plan and Manage Project.

Deliverables: Valuation Commitment Package **Milestone:** Development Commitment Review

Strategy: One Incremental Commitment Cycle, Risk assessment analysis.

Development phase

Duration: TBD

Concept: Construction Iteration, Transition Iteration Deliverables: Operation Commitment Package Milestone: Operation Commitment Review

Strategy: One Incremental Commitment Cycle, Risk assessment analysis.

Operation phase

Duration: TBD **Concept:** TBD

Deliverables: Valuation Commitment Package

Milestone: TBD Strategy: TBD

3.3 Skills

Team members	Role	Skills
Eirik Skogstad	Project Manager, Life Cycle	Current skills:
	Planner	Software Project
		Management, C++, Java,
		HTML, PHP, MySQL,
		JavaScript, XML,
		Winbook
		Required skills:

		MS Project, Life-Cycle tools, Git
Min Li	Feasibility Analyst, Operational Concept Engineer	Current skills: HTML, CSS, PHP, JavaScript, JSP, JQuery, Strut 2.0, Spring 2.0, Ibatis, Java, C++, API application, JSON, XML
		Required skills: Analytical skills, web development, UML modeling
Pittawat Pamornchaisirikij	NDI/NCS Acquirer & Evaluator, Tester	Current Skills: C, C++, HTML, PHP, JavaScript, CSS, socket programming, device driver programming in Linux, Joomla CMS, Drupal CMS, Thai language, English language
		Required Skills: Experience in web development domain
Punyawee Pakdiying	System Architect, Feasibility Analyst	Current Skills: Linux/Unix Command line (beginner level), Java, PHP, MySQL, SQL, HTML, JavaScript, CSS, Joomla, Drupal
		Required Skills: High level Linux/Unix Command line, DBMS, Middleware, Analytical skills, and NDI/NCS used in the project
Saloni Priya	Requirements Engineer, UML Modeler	Current Skills: General purpose modelling language, ArgoUML, Creately for UML, MySQL,PHP,CSS, HTML, rustic JavaScript, C#
		Required Skills: Winbook, Visual Paradigm, Communication skills for

		effective negotiation,
		Knowledge Contributor,
		Analytical skills,
		NDI/NCS/COTS experience
		and knowledge about web
		server hosting.
Ameer Elkordy	IIV&V, Quality Focal Point	Current skills:
Afficer Erkordy	11 v & v, Quanty Pocar Form	
		Database, Analytics, General
		Scripting
		Rusted skills:
		HTML, CSS, PHP, Java
		Required skills:
		Organization, Tracking,
		Winbook, Loud Voice, and
		Process & Deliverable
		Knowledge
Suleyman Erten	Operational Concept	Current Skills:
Suleyman Erten	<u> </u>	
	Engineer, Requirements	HTML, JavaScript, Java
	Engineer	Danis d Claille
		Required Skills:
		Goal Decomposition, Use
		Case Scenarios, UML
		Modelling, Winbook,
		Knowledge Contributor
Kamonphop Srisopha	Prototyper, UML Modeler	Current Skills:
		HTML, Java, PHP, MySQL,
		Rust, C++
		Required Skills:
		Winbook, Advanced UNIX/
		Linux Command line, R
	1	
		(statistical programming),
		(statistical programming), NDI/ NCS/COTS integration knowledge

4. Approach

4.1 Monitoring and Control

The project is monitored with a bi-weekly progress report and project plan. The progress report includes a progress description with total time spent on the project. It also includes the top project risks, number of SLOC, COTS software and defects/concerns.

4.1.1 Closed Loop Feedback Control

Draft documents/sketches/diagrams are shared on Google Drive where team members can quickly review and update them. Feedback for a specific artifact is given to the artifact leader either person-to-person or in team meetings.

4.1.2 Reviews

- Team meetings; we have a group meeting every day after CS577a class to debrief and review what we have accomplished, what we should do and what are some difficulties we are facing.
- Win-win negotiation; the negotiation helps us and the client to be on the same page and share the same understanding.
- IIV&V evaluations; Our Den team members make sure that the document looks good and check if time is logged on Bugzilla and provide feedback about the bug/artifact on the ticket for the owner to correct.
- TA feedback; the comments from all TAs are also useful.

4.2 Methods, Tools and Facilities

Tools	Usage	Provider
Github	Provide a version control system to store our team website files.	Github
Google drive	Contain all documents created by our team so that we can	Google
	collaborate	
Visual	Provide a tool to create various UML diagrams used in the	Visual
paradigm	project	paradigm
Balsamiq	The tool was used to develop the user interface prototype	Balsamiq
Microsoft	The office was used to create docs, presentation and XML files.	Microsoft
office		
Facebook	Provide a group feature to collaborate and make an appointment	Facebook
(Group/Chat)	among team members and client	
Join.me	The tool was used to share screen with DEN student	LogMeIn, Inc.
Skype	Video and/or Voice Chat	Microsoft

Bootstrap	to decorate our team website	Open source
Bugzilla	Provide a tool to create tasks, track task's statuses, and identify	USC
	effort used in each task	
Winbook	Provide a tool to facilitate the team to identify the project's	USC
	goals, win conditions of all stakeholders and prioritize them	

5. Resources

Estimated CSCI577a Effort: 8 team members at 10 hrs/week for 12 weeks Estimated CSCI577b Effort: 8 team members at 10 hrs/week for 12 weeks

Estimated total effort: 10 hours per week * 6 months = 60 PM

Programming language: PHP, HTML/CSS, SQL, JavaScript

Budget: assume that this project has no budget for development efforts. There might be a cost for hosting a server and acquire a domain name.

Table 6: Modules

No	Module	Description	SLOC (estimation)	REVL (estimation)
1	WAT point system	The point system that will provide users incentives to participate in the We Are Trojans network		15%
2	Forum Module	This module provides the students a platform to interact with each other 1,000 7%		7%
3	Profile Module	The system that allow users to add and modify their information 1,000 3%		3%
4	Store Module	The store used to redeem WAT points. First iteration will be limited to gift cards. 500 2%		2%
5	Notification Module	The system that notify users with changes, such as liking, disliking, and a special campaign	1,000	2%

Table 7: COCOMOII Scale Driver

Scale Driver	Value	Rationale
PREC	High	Many examples exist with features similar to this project
		(i.e. Stackoverflow.com, Facebook)
FLEX	High	Project has a very high flexible set of requirements but the
		limited schedule pull down FLEX from very high to high.
RESL	Nominal	The project has thoroughness with architectural definition,
		but the system has a high tendency of risks.

TEAM	High	Client's limited schedule availability could pose
		complexities
PMAT	Nominal	Relatively new team with limited experience working
		together under stressful deadlines

Table 8: COCOMOII Cost Drivers for WAT point system

Cost Driver	Value	Rationale
RELY	Nominal	Every other modules rely on this module. However, it is
		not risk to human life.
DATA	Low	We do not have much test data.
CPLX	Nominal	The analysis relating to the "WAT" Point system require
		some numerical analysis that is prone to precision
		problems needed to be handled.
RUSE	Nominal	This WAT point module is developed specifically for this
		project. So it is only reusable across project (nominal)
DOCU	Nominal	The documentation was developed for each phase of
		development.
TIME	Nominal	The system is expected to use less than 50% of the
		available execution time.
STOR	Nominal	It will take up at most 20% use of avaliable storage
PVOL	Nominal	In this project, we do not update the change frequently.
ACAP	High	The team cohesively works on gathering requirements and
		high level design of the system.
PCAP	High	Most of our team members are capable. We have mix
		skills from 90th percentile to 55 percentile so we are
		going to estimate in between = 75 percentile.
PCON	High	There is not much expectation of turnover with this
		project. It is possible that one of our member might not
		continue with this project.
APEX	Nominal	The team is not fully familiar with the COTS/NDI that
		will be used in developing the system.
PLEX	Nominal	In the team, there are mixes of people familiar and
		unfamilar with the platforms
LTEX	High	Every member of the team has used the language that will
		be used in development of this system.
TOOL	Nominal	Basic life-cycle tools, modertaly integrated.
SITE	High	The clients and the DEN students are not present at the
		same site, but connection is achieved using Skype.
SCED	Nominal	The schedule is fixed for 12 weeks.

Table 9: COCOMOII Cost Drivers for Forum Module

Cost Driver	Value	Rationale
RELY	Nominal	This module is crucial for the system, but a failure would
		only result in moderate losses.
DATA	Nominal	In forum functionality, we may have some amount of data
		like images and texts for testing.
CPLX	Nominal	Development of this module will mostly involve
		modification of an existing COTS forum.
RUSE	Low	Forum will be tailored for this specific project, no reuse.
DOCU	Nominal	The documentation was developed for each phase of
		development.
TIME	Nominal	The system is expected to use less than 50% of the
		available execution time.
STOR	Very	It will take up at < 80% use of avaliable storage
	High	
PVOL	Nominal	In this project, we do not update the change frequently.
ACAP	High	The team cohesively works on gathering requirements and
	8	high level design of the system.
PCAP	High	Most of our team members are capable. We have mix
		skills from 90th percentile to 55 percentile so we are
		going to estimate in between = 75 percentile.
PCON	High	There is not much expectation of turnover with this
		project. It is possible that one of our member might not
		continue with this project.
APEX	Nominal	The team is not fully familiar with the COTS/NDI that
		will be used in developing the system.
PLEX	Nominal	In the team, there are mixes of people familiar and
		unfamilar with the platforms
LTEX	High	Every member of the team has used the language that will
		be used in development of this system.
TOOL	Nominal	Basic life-cycle tools, modertaly integrated.
SITE	High	The clients and the DEN students are not present at the
		same site, but connection is achieved using Skype.
SCED	Nominal	The schedule is fixed for 12 weeks.

Table 10: COCOMOII Cost Drivers for Profile Module

Cost Driver	Value	Rationale
RELY	Nominal	moderate, easily recoverable losses
DATA	Low	The amount of test data will be relatively low compared to

	SLOC.					
CPLX	Low	Straightforward nesting of structured. Simple GUI				
		builder, straightforward database structure.				
RUSE	Nominal	Reusable across project.				
DOCU	Nominal	The documentation was developed for each phase of				
		development.				
TIME	Nominal	The system is expected to use less than 50% of the				
		available execution time.				
STOR	Nominal	It will take up at most 20% use of avaliable storage				
PVOL	Nominal	In this project, we do not update the change frequently.				
ACAP	High	The team cohesively works on gathering requirements and				
		high level design of the system.				
PCAP	High	Most of our team members are capable. We have mix				
		skills from 90th percentile to 55 percentile so we are				
		going to estimate in between = 75 percentile.				
PCON	High	There is not much expectation of turnover with this				
		project. It is possible that one of our member might not				
		continue with this project.				
APEX	Nominal	The team is not fully familiar with the COTS/NDI that				
		will be used in developing the system.				
PLEX	Nominal	In the team, there are mixes of people familiar and				
		unfamilar with the platforms				
LTEX	High	Every member of the team has used the language that will				
		be used in development of this system.				
TOOL	Nominal	Basic life-cycle tools, modertaly integrated.				
SITE	High	The clients and the DEN students are not present at the				
		same site, but connection is achieved using Skype.				
SCED	Nominal	The schedule is fixed for 12 weeks.				

Table 11: COCOMOII Cost Drivers for WAT Store Module

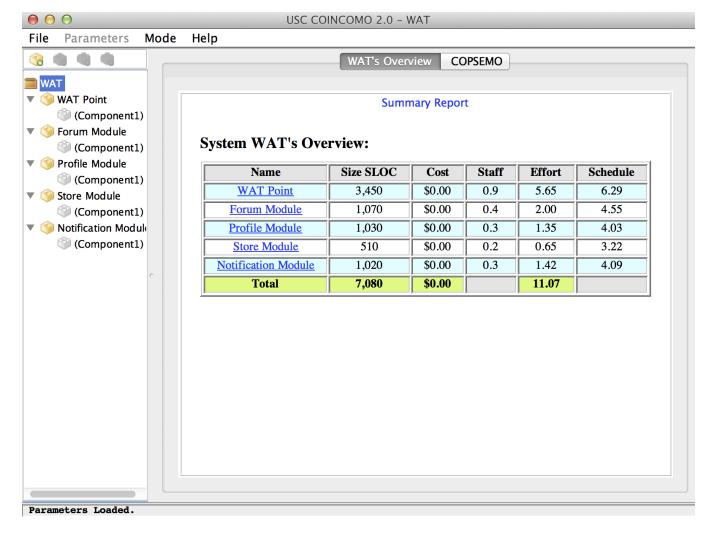

Cost Driver	Value	Rationale	
RELY	Low	It does not affect the system too much	
DATA	Low	We do not have much test data.	
CPLX	Low	Straightforward nesting of structured. Simple GUI builder, straightforward database structure.	
RUSE	Nominal	Reusable across project.	
DOCU	Nominal	The documentation was developed for each phase of development.	
TIME	Nominal	The system is expected to use less than 50% of the	

		available execution time.	
STOR	Nominal	It will take up at most 40% use of avaliable storage	
PVOL	Nominal	In this project, we do not update the change frequently.	
ACAP	High	The team cohesively works on gathering requirements and	
		high level design of the system.

		unfamilar with the platforms	
LTEX	High	Every member of the team has used the language that will	
		be used in development of this system.	
TOOL	Nominal	Basic life-cycle tools, modertaly integrated.	
SITE	High	The clients and the DEN students are not present at the	
		same site, but connection is achieved using Skype.	
SCED	Nominal	The schedule is fixed for 12 weeks.	

Table 12: COCOMOII Cost Drivers for Notification Module

Cost Driver	Value	Rationale	
RELY	Low	No other module relies on this. Failure will only cause	
		slight inconvenience.	
DATA	Low	We do not have much test data.	
CPLX	Nominal	Mostly simple nesting. Some intermodule control.	
RUSE	Nominal	Reuse across project.	
DOCU	Nominal	The documentation was developed for each phase of	
		development.	
TIME	Nominal	The system is expected to use less than 50% of the	
		available execution time.	
STOR	Nominal	It will take up at most 20% use of avaliable storage	
PVOL	Nominal	In this project, we do not update the change frequently.	
ACAP	High	The team cohesively works on gathering requirements and	
		high level design of the system.	
PCAP	High	Most of our team members are capable. We have mix	
		skills from 90th percentile to 55 percentile so we are	

		going to estimate in between = 75 percentile.	
PCON	High	There is not much expectation of turnover with this	
		project. It is possible that one of our member might not	
		continue with this project.	
APEX	Nominal	The team is not fully familiar with the COTS/NDI that	
		will be used in developing the system.	
PLEX	Nominal	In the team, there are mixes of people familiar and	
		unfamilar with the platforms	
LTEX	High	Every member of the team has used the language that will	
		be used in development of this system.	
TOOL	Nominal	Basic life-cycle tools, modertaly integrated.	
SITE	High	The clients and the DEN students are not present at the	
		same site, but connection is achieved using Skype.	
SCED	Nominal	The schedule is fixed for 12 weeks.	

Total number of week = 24 weeks (2 semesters) one person can work 10 hours per week.

According to COINCOMO II;

The COCOMO II estimation effort calculated from the 5 modules gives an effort of **11.07** PM

11.07 PM * 152 hrs/PM = 1682.64 hr to do the work 10 hrs/week/person * 24 weeks = 240 hr/person 1682.64 hrs / 240 hrs / person = 7.01 person

We have 8 team members, so according to this estimation we will be able to finish the project within the time constraint.

6. Iteration Plan

6.1 Plan

<< Provide a high-level overview of the content of the given iteration. Indicate which Life cycle milestones will be addressed. >>

6.1.1 Capabilities to be implemented

<< For the milestone identified above, identify the capabilities that will be implemented in the upcoming iteration. Identify the features, requirements or use—cases that are being developed (implemented, tested, etc.) for this iteration. Each component should be accounted for in at least one iteration. All requirements should be implemented and tested (or re-negotiated) by the completion of all the iterations. Be mindful of implementation dependencies. Document complex dependencies and communicate them to the appropriate development staff. >>

Table 13: Construction iteration capabilities to be implemented

ID	Capability	Description	Priority	Iteration
< ID >	< Capability >	< comments >	<value></value>	<value></value>

6.1.2 Capabilities to be tested

<< For the milestone identified above, identify the capabilities that will be tested in the upcoming iteration.

Identify the software features and combinations of software features to be tested this iteration. This may also include non-functional requirements or extra-functional requirements, such as performance, portability, and so forth.

Additionally you may need to test every requirement listed in the WinWin Agreements DC package, non-requirement component features such as COTS capabilities and quality, API functionality, etc. >>

Table 14: Construction iteration capabilities to be tested

ID	Capability	Description	Priority	Iteration
< ID >	< Capability >	< comments >	<value></value>	<value></value>

6.1.3 Capabilities not to be tested

<< Identify notable features, and significant combinations of features, which will not be tested this iteration and why (e.g. a given feature uses a feature which will be implemented in following iteration). >>

6.1.4 CCD Preparation Plans

<< Identify the clients and other users who will be involved in the Core Capability Drivethrough, the usage scenarios that it will support, and the specific CCD preparation plans and milestones. These may include

- user context-setting
- site preparation dry runs,
- feedback forms, and
- CCD risk management plans. >>

6.2 Iteration Assessment

6.2.1 Capabilities Implemented, Tested, and Results

<< Describes, in brief, the capabilities that were implemented and the test results. The capabilities implemented and tested do not necessarily need to match the ones listed in section 6.1 because some capabilities may have been pushed to the next iteration. >>

Table 15: Capabilities implemented, tested, and results

ID	Capability	Test Case	Test Results	If fail, why?	
< ID >	< Capability >	<tc-xx></tc-xx>	Pass/Fail	< comments >	

6.2.2 Core Capabilities Drive-Through Results

<< Briefly summarize the feedback you received from your client(s). You need to be specific enough to cover the critical capabilities or scenarios that were discussed, demoed, or shown. Your descriptions MUST, but not limited to, cover the following areas:

- Positive feedbacks
- Improvements needed/suggested
- Changes to-be considered (Reprioritized capabilities, requirements, GUI, etc.)
- Risks (New risks introduced, risks mitigated, etc.)

Note: Make sure to be specific to the capabilities shown/demonstrated/driven-through. Simply stating that the clients liked the capabilities is not sufficient. >>

6.3 Adherence to Plan

<< Describe how well the iteration ran according to plan. Was it on budget and on time? Is there any uncertainty in the Software Development Status? Provide some insight to avoid mistakes for future iterations. >>
